1 Overview 2

2 Description 2

1 Overview

EPRS-metrics-software (www.SmarterSolutions.com/eprs-metrics-software) provides a no-cost means to created 30,000-foot-level and satellite-level metric charts as described in:

- *Management 2.0: Discovery of Integrated Enterprise Excellence*
- *Leadership System 2.0: Implementing Integrated Enterprise Excellence*

This app accommodates the high-level Integrated Enterprise Excellence (IEE) data charting techniques for the following type of data:

- No subgroups
- Subgroups
- Attribute data

2 Description

The functions and options in the IEE chart builder are descriptive; however, the following needs to be highlighted:

- The columns in the data spreadsheet should only be those used in the data analysis. If there are extra columns, the data might not load properly and give an error.
- All columns should be the same length.
- Not all functions are applicable for all data types.
- Entering a date as a stage value needs to be in a format YYYY-MM-DD with leading zeros for MM and DD to keep two characters.

The referenced videos in the app provides how-to details for creating 30,000-foot-level charts.
